Cheek Teeth Root Tip Compound Forceps

CT20

These cheek tooth root tip compound forceps used for extracting loosened root tips or fractured cheek teeth, including slab fractures. Especially useful when the fragment is below gumline. The compound action allows very firm grasping of the tooth. It also has a spring which helps avoid applying too much pressure, helping to eliminate breakages in delicate fragments. Total length is 16 inches (40cm).

Short Nose - user able to shorten as needed.
Long Nose - 2.15 inch (55mm).

Stainless steel. Comes with a 5-year warranty

WAS \$601.47 EXC GST

Offset Extra Long Wolf Tooth Elevator (Set of 2)

WT13

These long wolf tooth elevators are offset to help you get into those tricky spots and around the speculum where access might be awkward with a straight elevator. Used to perform upper wolf tooth loosening whilst visualising through an open mouth with a speculum on.

Total length is 11.4 inches (29cm). Blade is 6mm wide and curved. Stainless steel. Comes with carry bag (colour may vary).

Comes with a 5-year warranty.

NOW \$111.29 EXC GST

Upper Incisor Handle 13 inch (33cm) Blade not included

HT05

This hand float is back angled to allow the ideal angle and positioning on the upper incisor teeth for the 3.25-inch (8.2cm) head to be pushed by your arm. The total length of this hand float is a short 13 inches (33cm). The short length minimizes pressure on your wrists. Can also be used on lower incisors.

Takes the "M" blade HT08. Blade not included. Comes with a 5-year warranty.

Arcade Speculums

Excellent for oroscopy of mandibular cheek teeth.

As we realise that the most critical part to performing high quality dentistry in horses depends largely on performing a thorough examination, the arcade speculum becomes a much more necessary piece of equipment.

With the arcade speculum in place, it keeps the tongue and cheeks away from the teeth, allowing better visualisation of the lingual and buccal sides of the cheek teeth, the gingival margins and interproximal spaces.

Great for use in doing periodontal treatment.

It can also be used as a cheek retractor for demonstrating problems to clients.

Comes with a 5-year warranty.

Complete Wolf Tooth Set

WT01

This kit will allow you to handle almost any size and shape of wolf tooth, including lowers. Once the tooth is loose, the 10-inch (25cm) forceps, with their spring and narrower head, are used to remove the tooth.

The burgess set with 4 head sizes will accommodate all sizes of upper wolf teeth. These are also excellent for blind wolf teeth and operculectomies on canines.

Comes with a 5-year warranty.

Molar Spreaders

CT02

These 22 inches (56cm) stainless steel spreaders allow the stretching and fatiguing of the periodontal ligament mesial (in front) and distal (behind) to the cheek tooth to be extracted.

They are essential in removing adult cheek teeth which are not already loose.

This instrument also provides an excellent way to extract retained deciduous cheek teeth which are worn down too much to grasp with forceps.

Stainless steel.
Comes with a 5-year warranty.
